Report Title: SEG3125 Assignment 1 — Portfolio Entry Page

Previous experience

My previous experience with web development includes learning basic HTML and CSS and creating simple web pages in a previous course/project. Through that experience, I became familiar with structuring a web page using HTML elements and applying CSS styles for layout, colors, typography, and spacing.

Tutorials

- W3Schools HTML Tutorial: <https://www.w3schools.com/html/>
- W3Schools CSS Tutorial: <https://www.w3schools.com/css/>

- Card documentation: <https://getbootstrap.com/docs/5.3/components/card/>

Inspired portfolio sites

- <https://kushagrawal.in/?ref=onpagelove>
I liked this portfolio because it uses a strong personal image, large typography, and a clean navigation structure. The design feels modern and professional, and the viewer can quickly understand who the designer is and what sections are available.
- <https://www.jonsaxton.com/?ref=onpagelove>
This portfolio inspired me positively because it uses a very strong and consistent visual identity. However, the glowing effects, terminal font, and visual noise can make longer content harder to read. This influenced my own design choices because I wanted to use a strong black and neon green visual theme, but still keep my layout simple, structured, and readable.
- <https://www.dotconor.com/>
This portfolio has a strong black-and-white visual style and large project images, which make it look modern, professional, and brand-focused. However, the visual focus is not very clear because the images, logo, cursor icon, and navigation are spread across the page, so users may not immediately know where to look or what to click first.

Design Choices

a. Color

For my portfolio, I chose a black, neon green, and bright yellow-green color palette to create a strong and energetic powerlifting-inspired style. The dark background gives the

design a serious and focused mood, while the neon colors add energy and visual impact. The high contrast also helps headings, links, and buttons stand out clearly.

b. Typography

For typography, I used BBH Hegarty and Squada One for headings because they look bold, strong, and energetic, which fits my powerlifting theme. Together, these fonts complement each other by balancing strong visual impact with readability. For body text, I used Source Sans Pro because it is simple and easier to read. This contrast between bold headings and clear paragraph text helps create visual hierarchy and makes the page easier to scan.

c. Screen Layout

For screen layout, I organized the homepage into clear sections: navigation bar, image carousel, About Me, How I Work, and 4 Case Studies. The large headings create scale and visual hierarchy, while the two-column card layouts keep the workflow and case studies balanced and easy to read. The strong contrast between black backgrounds and neon text helps important information stand out.
