Report Title: SEG3125 Assignment 2 — Service Site Page Report

Service

The service site I decided to create is **MN Powerlifting**, a professional powerlifting coaching service. The website offers three main services: **private coaching, personalized training plans, and nutrition plans**. The service focuses on helping lifters improve squat, bench press, and deadlift technique, follow structured strength programs, and receive basic nutrition guidance to support powerlifting performance. The site also includes an **appointment booking function** so users can request a consultation, as well as an **FAQ page** where users can find answers about services, pricing, training plans, nutrition plans, and powerlifting-specific coaching.

Persona

1. **Amy:** Amy is a beginner lifter with basic strength training experience who wants to explore powerlifting services and find coaching support for improving her lifting form.

AMY

Amy is a beginner lifter who already has some basic experience with strength training.

She is interested in entering the field of powerlifting, but she does not yet feel confident about her squat, bench press, and deadlift technique.

INTRINSIC CHARACTERISTICS

1. **Goal-oriented:** Amy wants to learn how to lift heavier weights in a structured way.
2. **Careful:** She is concerned about using incorrect form and wants professional feedback before developing bad training habits.
3. **Price-conscious:** Amy wants to understand the cost of coaching clearly before committing to a training package.

RELATION TO TECHNOLOGY

Amy is comfortable using websites and online forms. Since she is new to powerlifting coaching, she wants the website to clearly show available services, and what each service includes. Clear service cards and booking steps help her compare options before making a decision.

RELATION TO THE DOMAIN

Amy has some general strength training experience, but she is new to powerlifting. She wants to learn the proper form for the main powerlifting movements and understand techniques that can help her lift heavier weights safely and effectively.

GOAL

Amy wants to explore the available coaching services and is most interested in private coaching. She wants to book an initial consultation to ask about form correction, powerlifting technique, session numbers, and pricing before choosing a coaching plan.

2. Ryan: Ryan is a returning client with five years of powerlifting experience who wants to book an appointment for a customized training plan to prepare for his next competition.

INTRINSIC CHARACTERISTICS

1. **Experienced:** Ryan understands the basics of powerlifting and competition preparation.
2. **Disciplined:** He follows training plans seriously and wants clear weekly programming.
3. **Performance-focused:** He wants to improve his squat, bench press, and deadlift for his next competition.

RELATION TO TECHNOLOGY

Ryan is comfortable using websites and online booking systems. Since he has used the service before, he expects the website to help him quickly find the training plan service and book an appointment.

RELATION TO THE DOMAIN

Ryan has strong powerlifting experience and has already competed three times. He is not looking for beginner technique instruction, but for a customized training plan that supports competition preparation.

GOAL

Ryan wants to book an appointment with a coach to discuss his upcoming competition and request a personalized training plan. He wants the plan to help him organize his training, manage progress, and prepare for meet day.

RYAN

Ryan is an experienced powerlifter with 5 years of powerlifting training experience. He has competed in 3 powerlifting competitions and has used this coaching service before. He is now preparing for another competition and wants a more structured training plan.

Amy Storyboard: Exploring Coaching Services

Goal:

Amy wants to explore the available services and understand which option best fits her beginner powerlifting needs.

Step 1: Services Overview

Amy views the three available services: Private Coaching, Personalized Training Plan, and Nutrition Plan. Since she wants direct feedback on her lifting form, she clicks the Learn More button for Private Coaching and moves to Step 2.

Step 2: Private Coaching Details

Amy clicks Learn More on Private Coaching because she wants direct feedback on her lifting form. After reviewing the service information, she clicks the FAQ button to learn more about common questions and moves to Step 3.

Step 3: FAQ Page

Amy reads common questions about pricing, session numbers, and whether the service is focused on powerlifting.

Ryan Storyboard: Booking a Training Plan Consultation

Goal:

Ryan is a returning client. Since he already knows the coaching service, he wants to directly book an appointment to discuss a customized training plan for his next competition.

Step 1: Book Appointment Page

Ryan enters the service site and clicks the Book an Appointment button because he already knows he wants coaching support for competition preparation. This action takes him to Step 2, where he can fill out the appointment form.

Step 2: Appointment Form Page

Ryan fills out the appointment form with his basic information. After completing the form, he clicks Submit and moves to Step 3.

Step 3: Booking Confirmation Page

After submitting the form, Ryan receives a confirmation message. The page confirms that his appointment request has been submitted and a confirmation has been sent to his email.

Visual Design Choices in Relation to the Storyboards

Since my Assignment 1 portfolio used a black, neon green, and yellow-green color palette, the first storyboard continued this original visual identity. This made the design feel consistent with my portfolio and created a strong powerlifting-inspired style. However, because the assignment required two visually different storyboards, I used a different visual direction for the second storyboard. For the second version, I chose a red and black color palette inspired by the classic powerlifting brand style often seen in strength sports. After comparing the two directions, I found that the red and black version looked stronger, more professional, and more suitable for the service site. Because of this, I used the red and black color theme in the final service prototype, although the original portfolio homepage still keeps the black, neon green, and yellow-green theme.

The two storyboards also used different layouts. In the first storyboard, the Our Services page used a clear service-card layout, which made the three services easy to compare. This layout was simple, organized, and visually effective for Amy, who needed to explore the available services before making a decision. In the second storyboard, the main purpose was to show Ryan directly booking an appointment because he was already a returning client. However, I still included service information in the design because, in a real service site, users would likely scroll through service information before reaching the appointment section.

For the second storyboard, I experimented with a layout that placed images on the left and text on the right, similar to an F-shaped reading pattern. This helped display information differently from the first storyboard, but the mockup also felt slightly crowded. Because of this, I decided to use the cleaner service-card structure from the first storyboard in the final prototype. The final high-fidelity prototype combines both storyboards: it uses the service exploration flow from Amy's storyboard and the booking appointment flow from Ryan's storyboard. As a result, the final prototype includes service cards, expandable service details, an FAQ page, an appointment form, and a confirmation page.

Generative AI Acknowledgement

I used AI as a support tool during this assignment, but the role of AI was different for each part of the project.

For the mockups and storyboards, I did not use AI for the visual design. I was already familiar with Canva and Illustrator, so I created the visual layout, color choices, and overall design myself. I also have strong personal knowledge of powerlifting, so I did not need AI to generate the main service content. However, AI helped me organize the storyboard structure by suggesting how to divide each persona's goal into three clear mockup steps.

For the high-fidelity prototype, I already had basic experience with web design using Brackets and HTML/CSS. However, AI helped me write and revise parts of the HTML and CSS, especially when fixing layout issues, section spacing, and styling bugs. It was especially useful for the JavaScript

interactions, including the Learn More show/hide function and the appointment booking interaction) , as well as the React component for the interactive FAQ page. I used the suggestions to build the service cards, show and hide service details, create the appointment form, add the confirmation page, and implement the interactive FAQ section. I tested and adjusted the code myself to match my intended visual design.

For the report and submission process, AI helped me reorganize my writing and make some explanations clearer. It also guided me through technical submission steps, including pushing my code to GitHub and creating a Netlify deployment link. The final content, design decisions, wording, and submitted work were reviewed and edited by me.
